

## ISO 27001 & 27701 Certifications

**HALO is ISO 27001 ISMS (Information Security Management System) and ISO 27701 PIMS (Privacy Management Information System) certified. ISO 27001/27701 certification is known as the world's best-known standard for Information Security Management Systems (ISMS) and Privacy Information Management Systems (PIMS).**

ISO 27001 is the global standard for effective information management. It helps organizations avoid potentially costly security breaches. ISO 27701 helps organizations comply with most international data privacy regulations. Achieving ISO 27701 compliance establishes a framework covering most legal privacy requirements and improves protection from breaches by providing transparency to stakeholders, especially customers.

Technology is a vital part of today's business but, without data security you're vulnerable. HALO has the highest information security and privacy management certification available which exceeds the requirements for the world's largest organizations. In addition to this certification, HALO employs a dedicated Information Security team (this team is not in IT or Infrastructure it is an actual security team) who performs vulnerability scans, penetration tests, and security audits to ensure our customers' data and privacy are secure.
